

Amendments to the Claims:

1. (currently amended) A food container comprising:

a first compartment for holding a first food product, said first compartment having a first access region and a first coupling region, said first access region having a first opening disposed on a top of said container providing access to an interior of said first compartment; and

a second compartment for holding a second food product, said second compartment having a second access region and a second coupling region opposite said second access region, said second coupling region coupled to said first coupling region of said first compartment, said second access region having a second opening on a side of said second compartment and proximate a bottom of said container providing access to an interior of said second compartment,

whereby the first food product is dispensed through the first opening at the first access region of the container, and the second food product is dispensed through the second opening at the second access region of the container.

2. (canceled)

3. (original) The food container of claim 1, further comprising a first food stored in said first compartment and a second food stored in said second compartment.

4. (currently amended) The food container of claim 3, wherein said ~~first~~ second food is a dry rigid food product, and said ~~second product~~ first food is a conformable food product.
5. (original) The food container of claim 1, wherein said container is cylindrical.
6. (original) The food container of claim 1, wherein said first opening is sealed with a disposable lid.
7. (original) The food container of claim 6, further comprising a resealing lid for resealing said first opening after said disposable lid is removed.
8. (original) The food container of claim 1, wherein said second opening is sealed with a moveable flap.
9. (original) The food container of claim 8, wherein said moveable flap is disposable, wherein said container further comprises a rotative sleeve around said second compartment, wherein said sleeve comprises a hole that may be aligned with said second opening for dispensing product, or offset from said second opening to seal said second opening.
10. (original) The food container of claim 8, wherein said moveable flap is a resealable adhesive tape.

11. (original) The food container of claim 8, wherein said moveable flap is hinged and locks closed to seal said second opening.
12. (original) The food container of claim 1, wherein said first and second compartments are separable, modular components.
13. (original) The food container of claim 1, wherein said container further comprises a food dispensing mechanism dividing said second compartment into first and second chambers.
14. (original) The food container of claim 1, wherein said first compartment further comprises a spout in said first opening.
15. (currently amended) The food container of claim 14, wherein said first compartment is compressible.
16. (currently amended) A multiple-food canister comprising:
- a first food chamber;
 - a second food chamber, said second food chamber coupled to said first chamber;
 - a first opening at a first region of said first food chamber, said first region opposite said second food chamber and disposed on a top of said first food chamber;
 - a first moveable lid sealing said first opening;

a second opening at a second region of said second food chamber, said second region ~~opposite~~ on a side of said second food chamber and proximate a bottom of said first second food chamber;

a flap sealing said second opening;

a first food disposed in said first chamber; and

a second food disposed in said second chamber.

17. (currently amended) A multiple-food-product dispenser comprising:

an upper food compartment;

a lower food compartment, wherein a top of said lower food compartment is coupled to a bottom of said upper food compartment;

a resealable first opening disposed at a top of said first food compartment;

a resealable second opening disposed proximate a bottom of said second food compartment and on a side of said second food compartment;

a first food disposed in said upper food compartment; and

a second food disposed in said lower food compartment.

Claims 18-28 (canceled)

29. (new) The canister of claim 16, further comprising a disposable seal under said lid and covering said first opening.

30. (new) The canister of claim 16, wherein said canister is cylindrical.

DUN001

Page 5

31. (new) The canister of claim 16, wherein said flap is disposable, wherein said canister further comprises a moveable sleeve around said second compartment, wherein said sleeve has a first position for dispensing product from said second opening, and a second position for sealing said second opening.

32. (new) The canister of claim 16, wherein said flap is hinged and locks closed to seal said second opening.

33. (new) The canister of claim 16, wherein said first and second chambers are separable, modular components.

34. (new) The canister of claim 16, wherein said canister further comprises a food dispensing mechanism dividing said second chamber into first and second compartments.

35. (new) The dispenser of claim 17, wherein said first food is a conformable food product, and said second food is a dry rigid food product.

36. (new) The dispenser of claim 17, wherein said dispenser is cylindrical.

37. (new) The dispenser of claim 17, wherein said second opening is sealed with a moveable flap.

38. (new) The dispenser of claim 37, wherein said moveable flap is disposable, wherein said dispenser further comprises a moveable sleeve around said second compartment, wherein said sleeve has a first position for dispensing said second food from said second opening, and a second position for sealing said second opening.

39. (new) The dispenser of claim 17, wherein said first and second compartments are separable, modular components.

40. (new) The dispenser of claim 17, wherein said first opening is sealed with a lid.
